REMOTE VIEW SOFTWARE ALLOWS THE HSM PROTECTIONNET™ MONITORING SPECIALIST TO SEE
AND DOCUMENT WHAT IS HAPPENING WITHIN YOUR PROTECTED LOCATION.

Our HSM eVideoManager services include eVideo Alarm Verification, eVideo Guard Tour, eVideo Open/Close Services and eVideo Escort.

HSM eVideo Alarm Verification

With HSM eVideo Alarm Verification, our HSM ProtectionNET™ Customer Service Center automatically receives a video clip whenever an alarm signal is generated. This service significantly enhances the conventional alarm monitoring process by helping you to adhere to local ordinances, reduce false alarm costs with live support services, provide critical information to responding agencies, document events for evidence and improve apprehension results.

HSM eVideo Guard Tour

With HSM eVideo Guard Tour, you can replace or augment traditional guard tour services. Following your set schedule, our HSM ProtectionNET™ Monitoring specialists will look-in on your premises to enhance employee safety, identify suspicious activity on the premises, and prevent unauthorized access. This service allows you to reduce guard costs and improve guard patrol efficiencies, deter criminal activity, reduce shrinkage and document events for evidence.

HSM eVideo Open/Close Services

With HSM eVideo Open/Close Services, you can prevent the sharing of alarm passcodes and ensure the safety of your employees as they arm/disarm your alarm system. HSM provides both Open/Close Recording and Supervision eVideo services. With Open/Close Recording, HSM can record, document and archive an employee as they arm or disarm the alarm system. With Open/Close Supervision, HSM can visually review employees arming and disarming the alarm system. It can increase security and safety with assistance in the event of an emergency, obtain additional documentation of events for evidence and provide critical information for responding agencies.

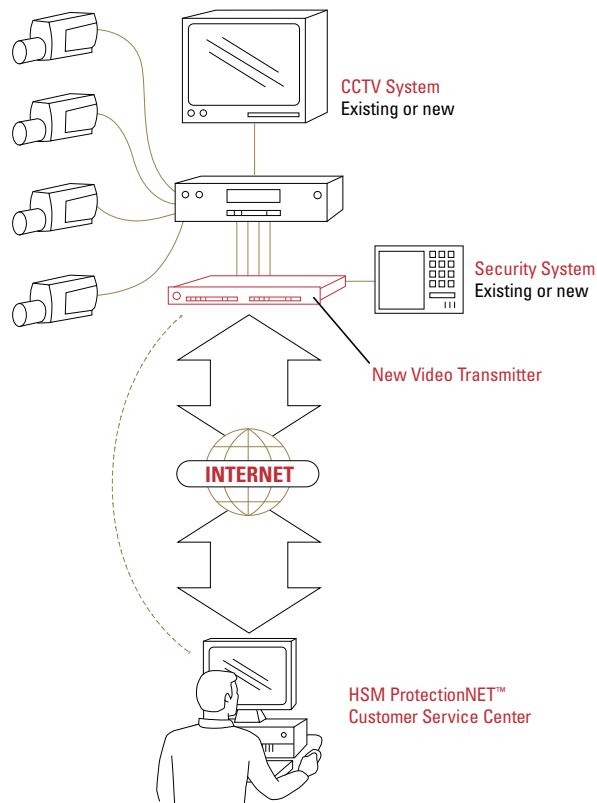

HSM eVideo Escort

With HSM eVideo Escort, you can ensure the safety of your employees as they complete high-risk work operations—or protect them as they walk to and from their cars. Upon customer notification, our HSM ProtectionNET™ Customer Service Center will provide real-time, live-view monitoring of employees to ensure their safety.

FOR MORE INFORMATION, CALL 1-877-HSM-4YOU. WE CAN SHOW YOU HOW THE HSM eVIDEOMANAGER CAN BE YOUR COMPANY'S EYES TO BETTER SECURITY, SAFETY AND OPERATIONAL EFFICIENCY.

HSM eVideoManager can utilize your existing alarm and CCTV systems. A video router is added at your premises to send video signals to the HSM ProtectionNET™ Customer Service Center. Video signals can be sent over Ethernet (LAN, Cable, DSL), T-1 and other communication modes.

HSM eVideoManager Has Unique System Features

- Full integration with HSM's single monitoring automation platform, for efficient and accurate operator response and easy data & video retrieval.
- A broad selection of communication transmission paths.
- Pre-Alarm and Post-Alarm video recording and view capabilities.
